

Optical Centering

1. Position the art in the upper left corner of the mounting board.
Divide borders in half to find center lines of those borders.
2. Draw a diagonal line from where the bottom border center line meets the right side of the board to the the bottom left corner of the photo.
3. Determine the location where the diagonal line crosses the vertical division line and note a horizontal line at that point.
4. The bottom of the art is mounted at the horizontal line determined in step 3.
